Third-year Computer Science student with military intelligence experience in data analysis. Skilled in software development and passionate about steganography, machine learning, and AI tools.

Possessing strong analytical thinking, independence, responsibility, and leadership ability, with a constant desire to learn and grow. Performing well under pressure and working well in collaborative team environments.

Education

Third-year B.Sc. student in **Computer Science** at Holon Institute of Technology
current GPA 86.7

Skills & Projects

Experienced in development with Assembly, C, CPP, Python, Java and Kotlin; working with Linux systems, object-oriented programming, data structures, algorithms, SQL databases and network communications protocols. Proficient in various development environments with experience in group projects and practical applications.

Steganography Project – encryption of data in files (2025) - python

Group work with 4 partners on a system for encrypting and hiding information within images, videos, and audio files using LSB algorithms and encryption methods. Project is still in progress.

Shelter – closest shelter navigation app (2025) – Kotlin

Developed an Android app that locates the nearest shelter or amenity using Google Maps and Navigation APIs. The app provides real-time navigation and requires an internet connection for API get-requests.

Military Service

Pilot Course 2020–2021

Data Analyst (Intelligence Researcher) at Gaza Division 2021–2023

- Awarded **Outstanding Soldier** by the Division Commander

Languages

- Hebrew – Native
- English – High level (reading, writing, and speaking)
